

VistaCurve Fixed Frame

§ Curved aluminum extrusions To perfectly match the focal geometry of an anamorphic lens, in four radii

Seymour-Screen Excellence's VistaCurve™ projection screens have been designed to provide the perfect match to images projected through an anamorphic lens. Ideal cinematic projection is achieved only with Cinema Scope aspect ratio, which is the format adopted for production of most large-budget films. The unique immersion provided by the widescreen imaging is further enhanced by a curved screen, as the edges of the screen define a more lifelike and enveloping space.

Perfectly correlated to the panamorphic projection, the VistaCurve offers four different radii to match the geometry of the image.

Cutting edge ISF-certified Enlightor 4K is provided as standard with VistaCurve screens, for a no-compromise Home Theater performance. Once seen, the VistaCurve is a screen you won't want to live without.
